

How to Enable Navigation in Surveys

Navigation allows you to move to the previous questions in a survey. If the navigation functionality is disabled, you can only move to the next question and not to the previous ones. Navigation works in the following situations:

1. When a survey is presented in the format of **One Question Per Page**.
2. When there's a **Page Break** between questions.

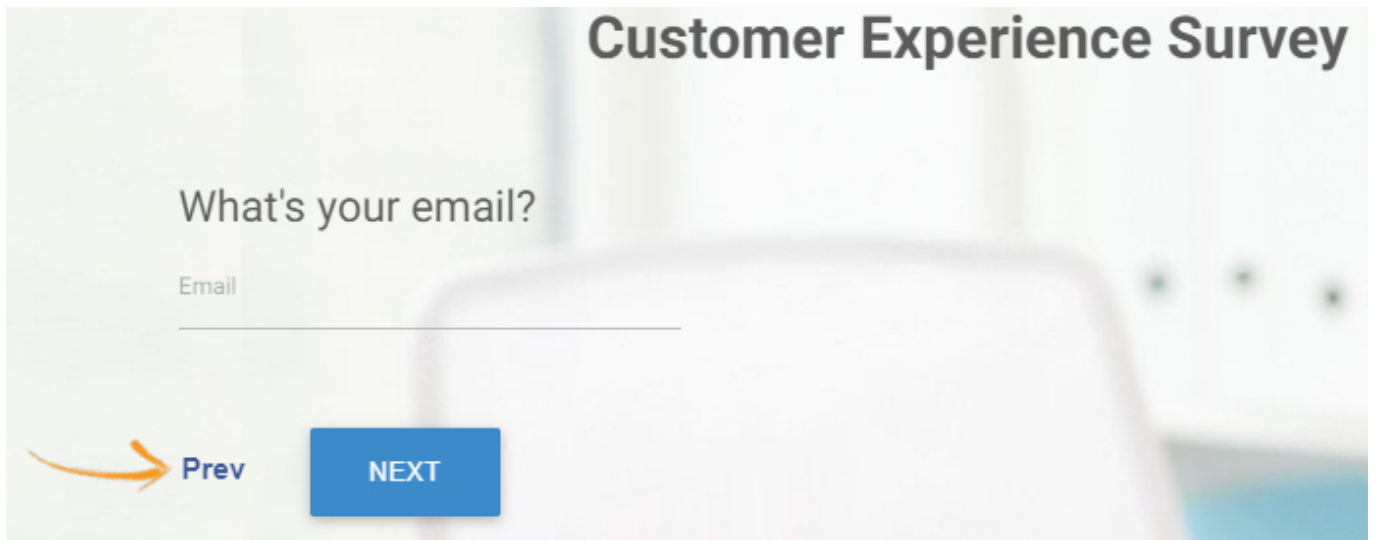

Here's how to access and use the Navigation feature in a survey:

Step 1: Go to a survey's **Settings >> General**. Under the **Presentation** section, there's the setting of **Navigation Between Pages**.

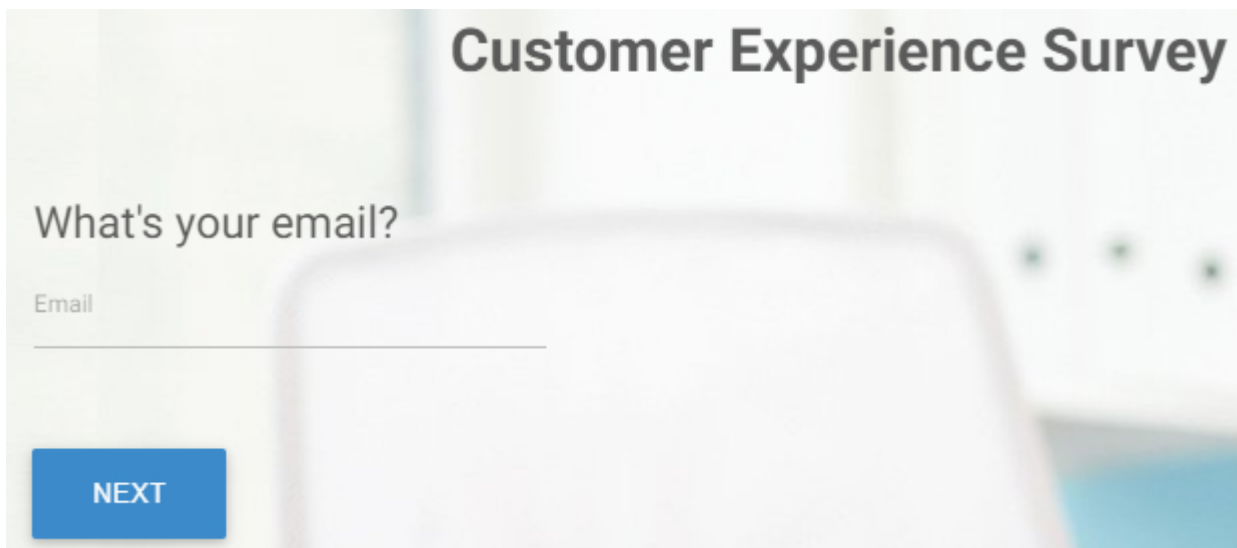

The screenshot shows the ProProfs Survey Maker interface. At the top, there is a navigation bar with buttons for 'Create', 'Settings', 'Send', 'Reports', 'Preview', and 'Save'. The 'Settings' button is highlighted with an orange arrow. Below the navigation bar, the survey title 'Customer Experience Survey' is displayed. A horizontal menu contains several settings categories: 'General', 'Security', 'Scoring', 'Notifications', 'Theme', 'Integrations', 'Social Media', and 'Advanced'. The 'General' category is selected and highlighted with an orange arrow. Under the 'General' section, there are two sub-sections: 'Order' and 'Presentation'. The 'Presentation' section contains two settings: 'Navigation Between Pages' and 'Question Per Page'. The 'Navigation Between Pages' setting is set to 'Yes' and is highlighted with an orange arrow. The 'Question Per Page' setting is set to 'One' and is also highlighted with an orange arrow.

Step 2: When the **Navigation Between Pages** setting is **enabled**, you'll see the **Prev** (Previous) option in a survey to go back to the previous questions, as shown in the screenshot below.

Step 2.1: When the **Navigation Between Pages** setting is **disabled**. You **only get the Next** option to move to the next question in a survey. You cannot go back to any previous question.
